SUMMARY

Recent Software Engineering graduate focused on Android mobile development (Kotlin/Jetpack Compose) and fullstack web applications (React, Node.js, Next.js). My undergraduate thesis project, which achieved 96.7% accuracy in AI-based disease diagnosis for potato crops, demonstrates my ability to research, develop, and deploy complex technological solutions with real-world impact. I am seeking my first professional opportunity as a Junior Developer, where I can apply my knowledge of MVVM architecture, databases (SQL/NoSQL), and offline-first development to build scalable, user-centered products.

EDUCATION

Universidad Técnica de Ambato

Software Engineer

Ambato, Ecuador

September 2019 - July 2026

EXPERIENCE

ASSA

Ambato, Ecuador

FullStack Developer (Internship)

February - March 2025

- Redesigned a Power Apps application for logging equipment and machinery maintenance incidents, implementing an intuitive form with validations and a connection to the company database to store and manage reports.
- Diagnosed and performed preventive and corrective maintenance on computer equipment (printers and laptops), applying hardware and software troubleshooting knowledge.
- Built an end-to-end Power Apps solution to automate the vehicle purchase contract signing process, along with a Power Automate flow that automatically generated PDF contracts with the entered information and emailed them to clients for digital signature.

FEATURED PROJECTS

Papa Sana

Latacunga, Ecuador

AI-Based Potato Disease Diagnosis (Undergraduate Thesis)

July 2026

- Developed an offline-first Android application that classifies 8 types of diseases/pests in potato leaves using a MobileNetV2 model optimized with TensorFlow Lite and INT8 quantization, achieving 96.7% accuracy.
- Implemented an MVVM architecture in Kotlin/Jetpack Compose with CameraX for real-time analysis and Room for diagnosis history, with 106ms local inference latency and an 18MB APK.
- Field-validated the tool with real farmers and agronomists in Saquisilí, Cotopaxi, achieving 91.4% agreement with expert agronomists and SUS usability scores of 4.24/5.
- Managed the project lifecycle using Mobile-D for agile mobile development and CRISP-DM for the AI model's and validation process.

SKILLS

Languages: Python, Java, Javascript, PHP, Kotlin

Frontend: HTML5, CSS3, React, Next.js, Angular

Backend: Node.js, Express.js, REST APIs

Databases: MySQL, SQL Server, Firebase, MariaDB

Tools: Git, Postman, JIRA, Docker, Vercel

CERTIFICATIONS

SUDEN: Technical Specialty in Computer and Printer Maintenance (2024)

Google Activate: Mobile App Development (2024)

Fundación Carlos Slim: Machine Learning Fundamentals (2024)
